Joey Wang

Senior Software Engineer | Applied AI & Agent Workflows

joeyw@reallyenglish.com · github.com/joeywang · linkedin.com/in/joey-dev

Summary

Senior software engineer combining Ruby on Rails, systems integration, and production reliability with hands-on applied AI experiments. Work includes local-model agent integration, codebase context, and repeatable task evaluation. Interested in Applied AI and Forward Deployed Engineering roles that connect user problems with implementation, integration, and dependable delivery.

Selected AI work and engineering projects

Local coding-agent integration (hands-on experiment)

Connected LM Studio's OpenAI-compatible endpoint to agent clients for coding workflows. Documented setup checks, context limits, cache issues, and output-handling failures. Technical write-up

Local LLM evaluation (hands-on experiment)

Documented a repeatable small-model testing workflow covering instruction following, structured output, coding tasks, and runtime constraints on modest hardware. Technical write-up

Durable codebase context (engineering workflow)

Combined a local code graph, semantic diagnostics, and stable project instructions to give coding agents inspectable context about existing systems. Technical write-up

Learning platforms and mobile delivery

Led development of Rails learning platforms and a React Native learning application, including offline-learning capabilities. Built course-management features with Stimulus and Turbo.

Professional experience

Senior Web Engineer · Kitman Labs

Feb 2023 – July 2024

- Collaborated with data scientists on integrating machine learning models and predictive analytics features.
- Developed athlete-management and performance-tracking features.
- Investigated application performance through code refactoring and database query optimization.

Senior Web Engineer · Ably

Jan 2022 – Nov 2022

- Implemented features for a real-time data platform.
- Helped containerize complex Rails applications and improve deployment consistency.
- Investigated and optimized Ruby and Puma performance.

Lead Ruby Developer · Reallyenglish

Oct 2005 - Jan 2022

- Led architecture and development across multiple generations of a learning management platform.
- Worked across application delivery, infrastructure automation, databases, and production operations.
- Mentored developers and promoted testing, code quality, and maintainable engineering practices.

Technical skills

Applied AI practice

Local-model and agent integration · OpenAI-compatible APIs · Codebase context and MCP tooling · Task-output checks and runtime benchmarking · Human approval boundaries

Software and integration

Ruby / Ruby on Rails · JavaScript / Node.js · Python · React Native · API design / System design

Data and delivery

PostgreSQL / MySQL · Docker / CI/CD · GCP / AWS · Git / Test-driven development · Performance investigation

Open source

Public repository work includes bug fixes, dependency maintenance, feature contributions, and Docker packaging. GitHub profile
